DESIGN & DEVELOPMENT

MICROSERVICES

Auth Microservice: To handle authentication of the employee.

Employee Microservice: To handle employee-related services.

Offer Microservice: To handle offer-related services.

Points Microservice: To refresh points gained by the employee.

AUTH MICROSERVICE

REST Endpoints

- **/login** : to log in the employee and generate JWT token.
- **/validate** : to validate the JWT token.

user-controller User Controller	
POST	/login login
GET	/validate getValidity

A look at swagger.html for Auth Microservice

REST Controller

- Rest controller calls the UserServiceImpl.java where all the necessary details are implemented.

```
@PostMapping("/login")
public ResponseEntity<UserToken> login(@RequestBody UserModel user) {
    log.info("Inside Login : ");
    return new ResponseEntity<UserToken>(userServiceImpl.login(user), HttpStatus.OK);
}
```

One of the Post mappings of the rest controller (to login the user)

AUTH SERVICE

```
// validates the JWT token
public AuthResponse getValidity(String token) {
    // retrieving the token ( removing the Bearer from the header)
    String token1 = token.substring(7);
    AuthResponse authResponse = new AuthResponse();
    // if valid
    if (jwtUtil.validateToken(token1)) {
        log.info("Token is valid");

        // extract the user name
        String username = jwtUtil.extractUsername(token1);

        // set the values for the response
        authResponse.setUsername(username);
        authResponse.setValid(true);
        authResponse.setEmpid(userRepository.findByEmpUsername(username).getEmpid());
    } else {
        authResponse.setValid(false);
        log.error("Token is invalid or expired...");
    }

    return authResponse;
}
```

One of the Post mappings of the rest controller (to login the user)

Exception Handling

- **Rest Exception Handler** : To handle all the exceptions that occurs in the microservice with proper status code.
- **UnauthorizedException** : Thrown when the user is invalid.

EMPLOYEE MICROSERVICE

REST Endpoints

- **/employee/viewProfile/{id}** - to view employee details by id parameter
- **/employee/viewEmployeeOffers/{id}** - to view all the offers posted by the employee through id parameter
- **/employee/viewMostLiked/{id}** - to view top 3 most liked offers of the employee by id parameter

A look at [swagger.html](#) for Auth Microservice

REST Controller

- **Rest controller calls the employeeServiceImpl.java where all the necessary details are implemented.**

```
@CrossOrigin(origins = "http://localhost:4200")
@GetMapping("/viewEmployeeOffers/{id}")
public ResponseEntity<?> viewEmployeeOffers(@RequestHeader(name = "Authorization", required = true)
    @PathVariable("id") int employeeId) throws InvalidUserException, MicroserviceException {
    log.info("Inside view employee offers");
    return new ResponseEntity<>(employeeService.viewEmpOffers(token, employeeId), HttpStatus.OK);
}
```

One of the Get mappings of the rest controller (to view the profile of the user)

EMPLOYEE SERVICE

```
@Override
public List<EmployeeOffers> viewEmpOffers(String token, int id) throws MicroserviceException, InvalidUserException {
    log.info("Inside view employee offers");

    AuthResponse authResponse;
    List<EmployeeOffers> empOffers;

    // validate the user
    try {
        authResponse = authClient.getValidity(token).getBody();
    } catch (Exception e) {
        throw new MicroserviceException(e.getMessage());
    }

    // if token is valid
    if (authResponse.isValid()) {
        // verify the user id with the token id
        if (authResponse.getEmpid() != id) {
            throw new InvalidUserException("invalid token for the user");
        }
        try {
            empOffers = offerClient.getOffersById(token, id);
        } catch (Exception e) {
            throw new MicroserviceException(e.getMessage());
        }
        return empOffers;
    } else {
        log.error("Token invalid");
        throw new InvalidUserException("Invalid User");
    }
}
```

Exception Handling

- **Employee Exception handler** : to handle all the exceptions that occurs in the microservice with proper status code
- **InvalidUserException** : thrown when the user is unauthorized
- **MicroserviceException** : thrown when there is an error in the communicated microservice.

Feign Clients

- **Auth client** : to communicate with the authentication microservice
- **Offer client** : to communicate with the offer microservice

```
//to connect to authentication service
@FeignClient(url = "${auth.feign.client}", name = "${auth.feign.name}")
public interface AuthClient {

    // checks the validity of the jwt token
    @RequestMapping(path = "/validate", method = RequestMethod.GET)
    public ResponseEntity<AuthResponse> getValidity(
        @RequestHeader(name = "Authorization", required = true) String token);
}
```

OFFER MICROSERVICE

REST Endpoints

- **/offer/addOffer** - to post a new offer.
- **/offer/editOffer** - to edit an existing offer.
- **/offer/engageOffer** - to engage an offer.
- **/offer/getOfferByCategory** - to filter offers by category
- **/offer/getOfferByPostedDate** - to filter offers by posted date.
- **/offer/getOfferByTopLikes** - to retrieve top 3 most liked offers.
- **/offer/getOfferDetails/{id}** - to retrieve offer by id parameter.

REST Controller

- **Rest controller calls the offerService.java where all the necessary details are implemented**

```
@CrossOrigin(origins = "http://localhost:4200")
@GetMapping("/getOfferDetails/{offerId}")
public Offer getOfferDetails(@RequestHeader("Authorization") String token, @PathVariable("offerId") int offerId)
    throws OfferNotFoundException, InvalidTokenException, MicroserviceException {

    log.debug("inside getOfferDetails method of offer microservice");
    Offer offer = offerService.getOfferDetails(token, offerId);
    return offer;
}
```

One of the Get mappings of the rest controller (to get the details of an offer, by offer id)

OFFER SERVICE

```
public Offer getOfferDetails(String token, int offerId)
    throws OfferNotFoundException, InvalidTokenException, MicroserviceException {
    // authenticate the user
    ResponseEntity<AuthResponse> response;
    try {
        response = authClient.verifyToken(token);
    } catch (Exception e) {
        log.info("some error in auth microservice");
        throw new MicroserviceException(e.getMessage());
    }
    // check if token is valid
    if (response.getBody().isValid()) {
        Optional<Offer> offer = offerRepository.findById(offerId);
        // if offer is not found
        if (!offer.isPresent())
            throw new OfferNotFoundException("No offer found");

        return offer.get();
    }
    // if token is invalid
    else {
        throw new InvalidTokenException("token is invalid");
    }
}
```

Exception Handling

- **Global Exception handler** - to handle all the exceptions that occurs in the microservice with proper status code.
- **EmployeeNotFoundException** - thrown when no employee is found.
- **ImproperDateException** - thrown when improper date is passed.
- **InvalidTokenException** - thrown when the jwt token is invalid.
- **MicroserviceException** - thrown when the communicated microservice is not working.
- **OfferNotFoundException** - thrown when no offers are found.

Feign Clients

- **Auth client** - to communicate with the authentication microservice.
- **Employee client** - to communicate with the employee microservice.

```
//to connect to authentication service
@FeignClient(url = "${auth.feign.client}", name = "${auth.feign.name}")
public interface AuthClient {

    // checks the validity of the jwt token
    @RequestMapping(path = "/validate", method = RequestMethod.GET)
    public ResponseEntity<AuthResponse> getValidity(
        @RequestHeader(name = "Authorization", required = true) String token);
}
```

POINTS MICROSERVICE

REST Endpoints

- **/getpointsbyemp/{id}** - to get points gained by the employee.
- **/refreshpointsbyemp/{id}** - to refresh the points of the employee.

points-controller Points Controller		
GET	/getpointsbyemp/{id}	getPointsByEmpId
POST	/refreshpointsbyemp/{id}	refreshPointsByEmpId

A look at swagger (for points controller)

REST Controller

- **RESR controller calls the pointsServiceImpl.java where all the necessary details are implemented.**

```
@GetMapping("/getpointsbyemp/{id}")  
public ResponseEntity<Integer> getPointsByEmpId(@RequestHeader(name = "Authorization") String token,  
    @PathVariable("id") int id) throws MicroserviceException {  
    log.info("Inside getpointsbyemployeeid of points microservice");  
    return new ResponseEntity<>(pointsService.getPoints(token, id), HttpStatus.OK);  
}
```

One of the Get mappings of the REST controller (to get the points gained by the employee)

EXCEPTION HANDLING

- **InvalidUserException** - thrown when the jwt token is invalid
- **MicroserviceException** - thrown when the communicated microservice is not working
- **PointsExceptionHandler** - to handle all the exceptions thrown by the rest controller

FEIGN CLIENTS

- **Auth client** - to communicate with the authentication microservice
- **Employee client** - to communicate with the employee microservice
- **Offer client** - to communicate with the offer microservice

```
@FeignClient(url = "${offer.feign.client}", name = "${offer.feign.name}")
public interface OfferClient {

    @GetMapping("/getOffers/{emp_id}")
    public List<Offer> getOfferByEmpId(@RequestHeader(name = "Authorization")
        String token,
        @PathVariable("emp_id") int id);

    @GetMapping("/getPoints/{emp_id}")
    public int getPointsById(@RequestHeader("Authorization")
        String token,
        @PathVariable("emp_id") int id);
}
```

APP SCREENSHOTS

LANDING PAGE

LOGIN PAGE

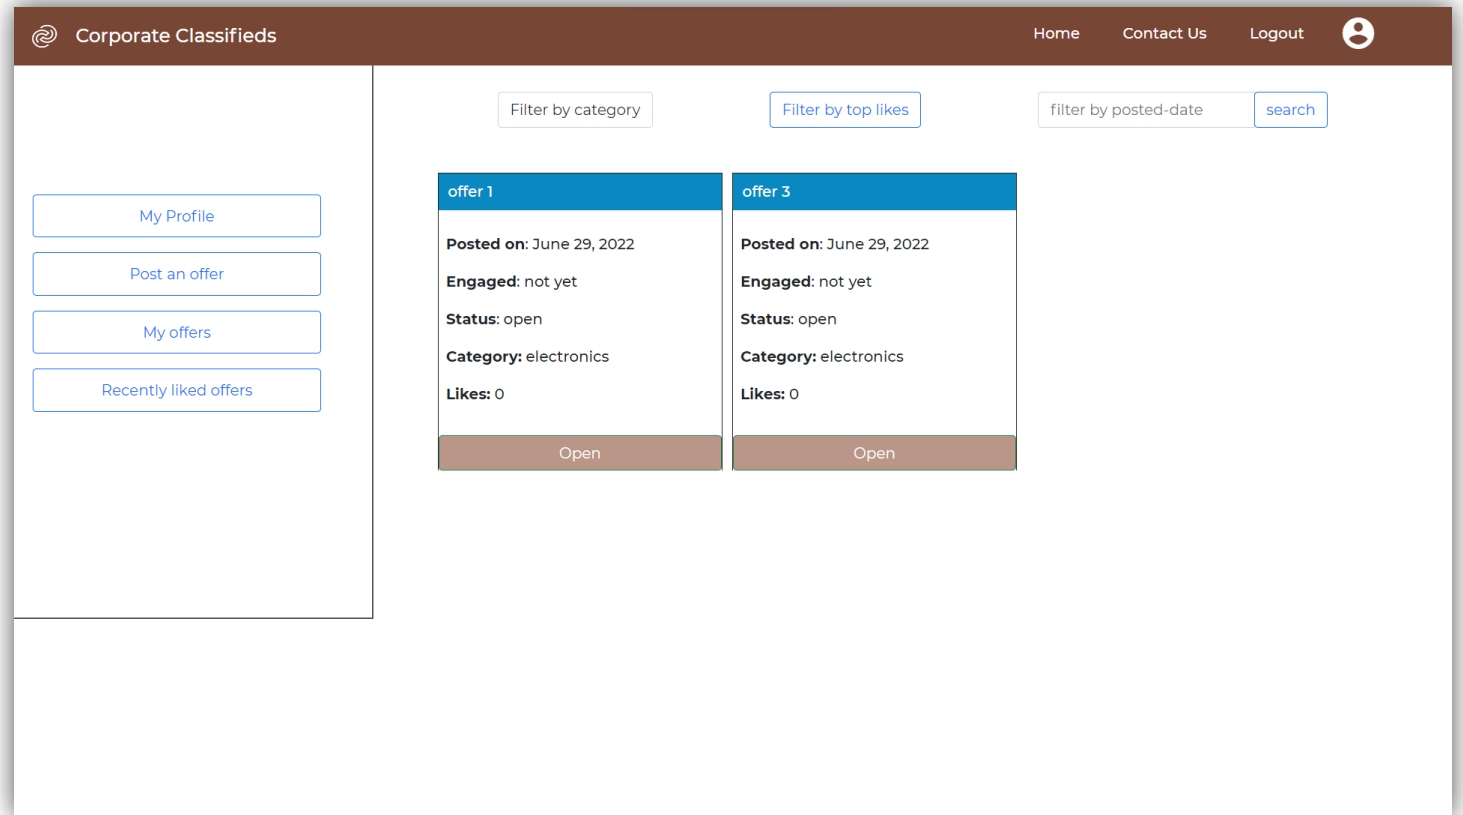

A login form on an orange background. It has a title "Login", a "Username" label above a text input field with placeholder "Please enter your username...", a "Password" label above a text input field with placeholder "Please enter your password...", and a "Sign in" button at the bottom.

A login form on an orange background, identical to the first one but with validation. It includes error messages: "Username is required." in a pink box below the username field, and "Password is required." in a pink box below the password field. The "Sign in" button is at the bottom.

Proper validation for each field
